Hyderabad, India

## Education

|                                                                                 |                            |
|---------------------------------------------------------------------------------|----------------------------|
| <b>Anurag University, Hyderabad</b><br><i>B.Tech in Artificial Intelligence</i> | <b>Jun 2020 – Jun 2024</b> |
| <b>Global Indian International School</b><br><i>CBSE</i>                        | <b>2018 – 2020</b>         |
| <b>Kiran International School</b><br><i>CBSE</i>                                | <b>2016 – 2018</b>         |

## Work Experience

|                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                             |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------|
| <b>Cognizant</b><br><i>Jr Software Engineer</i>                                                                                                                                                                                                                                                                                                                                                                                                      | <b>Oct 2024 – Present</b><br><i>On-Site</i> |
| <ul style="list-style-type: none"><li>Developed and maintained .NET 7 microservices deployed on Azure, integrating GitHub, CI/CD pipelines for seamless delivery. Conducted in-depth code analysis and performance tuning, leveraging advanced data structures and algorithms to optimize backend logic.</li><li>Improved API speed by fixing a performance issue, cutting response time from 350ms to 150ms and making the system faster.</li></ul> |                                             |

## Technical Skills

**Languages:** Python, C Sharp, JavaScript, SQL, C++.

**Technologies & Tools:** Angular, SQL, .NET, Power Platform, API, MVC, Azure CI/CD, Azure SQL DB,

## Projects

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |             |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|
| <b>Transaction Detection System</b><br><i>Python, Machine Learning, NLP, Scikit-learn, Pandas, Matplotlib</i>                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>2025</b> |
| <ul style="list-style-type: none"><li>Developed a <b>machine learning model</b> to scan email content and extract transaction history from large-scale datasets.</li><li>Integrated <b>NLP</b> techniques to categorize expenses and identify transaction types with high accuracy.</li><li>Analyzed spending patterns and created predictive models using <b>Scikit-learn</b> and <b>Pandas</b>.</li><li>Emphasized usability and accessibility by visualizing insights with <b>Matplotlib</b> and designing intuitive dashboards.</li></ul> |             |
| <b>Traffic-Aware Shortest Path Finder</b><br><i>C#, OpenGL, Dijkstra, Bellman-Ford, Graph Theory</i>                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>2024</b> |
| <ul style="list-style-type: none"><li>Built a traffic-aware routing system using <b>Dijkstra</b> and <b>Bellman-Ford</b> algorithms for shortest path calculation.</li><li>Achieved efficient graph traversal and route optimization by applying <b>Graph Theory</b> concepts.</li><li>Analyzed traffic data to dynamically adjust routes based on user's average speed and congestion levels.</li></ul>                                                                                                                                      |             |
| <b>Learning Destiny – Relation-Based Learning Platform - <a href="http://www.learningdestiny.in">www.learningdestiny.in</a></b><br><i>Firebase, Angular, TypeScript, HTML, CSS, Firestore</i>                                                                                                                                                                                                                                                                                                                                                 | <b>2023</b> |
| <ul style="list-style-type: none"><li>Created a scalable learning platform with real-time data sync using <b>Firebase Realtime Database</b> and <b>Firestore</b>.</li><li>Implemented secure user authentication and personalized learning paths using <b>Firebase Auth</b>.</li><li>Utilized <b>Angular</b> and <b>TypeScript</b> to build responsive UI with dynamic content delivery.</li><li>Emphasized accessibility and usability through clean design and modular architecture using <b>HTML</b> and <b>CSS</b>.</li></ul>             |             |

## Additional Technical Skills

- Salesforce : received ranger badge and good understanding of Apex
- Mentor at LearningDestiny Academy: Guiding learners in DSA, Web development and personalized learning plans.
