

THAKUR AMAN SINGH

+91 97042 52345 tamansingh6@gmail.com leetcode.com/u/Amansingh1512 linkedin.com/in/thakur-aman-singh
Hyderabad, India

Education

Anurag University, Hyderabad <i>B.Tech in Artificial Intelligence</i>	Jun 2020 – Jun 2024
Global Indian International School <i>CBSE</i>	2018 – 2020
Kiran International School <i>CBSE</i>	2016 – 2018

Work Experience

Cognizant <i>Jr Software Engineer</i>	Oct 2024 – Present <i>On-Site</i>
– Currently architecting and implementing scalable, fault-tolerant Microservices using Kafka, C Sharp, and .NET 7, with plans for deployment on Azure. – Learnt to design distributed systems with optimized data flow, caching strategies, and asynchronous processing aligned with good-tier engineering standards. – Understood and practiced advanced DSA, System Design, and Clean Architecture principles, preparing for high-bar engineering roles.	

Technical Skills

Languages: Python, C Sharp, JavaScript, SQL

Technologies & Tools: Angular, SQL, .NET, Power Platform, Azure, API, MVC, Azure CI/CD, Docker, Kafka, Azure SQL DB,

Projects

Transaction Detection System <i>Python, Machine Learning, NLP, Scikit-learn, Pandas, Matplotlib</i>	2025
– Developed a machine learning model to scan email content and extract transaction history from large-scale datasets. – Integrated NLP techniques to categorize expenses and identify transaction types with high accuracy. – Analyzed spending patterns and created predictive models using Scikit-learn and Pandas. – Emphasized usability and accessibility by visualizing insights with Matplotlib and designing intuitive dashboards.	
Traffic-Aware Shortest Path Finder <i>C#, OpenGL, Dijkstra, Bellman-Ford, Graph Theory</i>	2024
– Built a traffic-aware routing system using Dijkstra and Bellman-Ford algorithms for shortest path calculation. – Achieved efficient graph traversal and route optimization by applying advanced Graph Theory concepts. – Analyzed traffic data to dynamically adjust routes based on user's average speed and congestion levels.	
Learning Destiny – Relation-Based Learning Platform <i>Firebase, Angular, TypeScript, HTML, CSS, Firestore</i>	2023
– Created a scalable learning platform with real-time data sync using Firebase Realtime Database and Firestore. – Implemented secure user authentication and personalized learning paths using Firebase Auth. – Utilized Angular and TypeScript to build responsive UI with dynamic content delivery. – Emphasized accessibility and usability through clean design and modular architecture using HTML and CSS.	

Additional Technical Skills

- Salesforce Ranger: Demonstrated advanced proficiency in Salesforce development and architecture.
- Mentor at LearningDestiny Academy: Guiding learners in DSA, system design, and personalized learning plans.
