leetcode.com/u/Amansingh1512 Hyderabad, India

Education

Anurag University

B.Tech in Artificial Intelligence (GPA: 8.07)

Jun 2020 – Jun 2024

Hyderabad, India

Work Experience

Cognizant

Oct 2024 – Present

Junior Software Engineer

Hyderabad, India

- Worked as a full-stack developer using ASP.NET Core, C, Angular, React, Azure, Docker, Kubernetes, and Redis to build scalable applications with Clean Architecture and SOLID principles.
- Migrated legacy applications (SDAU & Employee IAM) from old .NET Framework codebases into modern .NET Core MVC structure, improving performance and ensuring backward compatibility.
- Set up CI/CD pipelines with Azure DevOps, automated builds and deployments, and used Docker + Kubernetes for containerization and scaling.
- Implemented secure authentication and authorization using LDAP, Azure Active Directory, OAuth2.0, and JWT for Identity and Access Management.
- Optimized API communication with caching strategies and parallel processing, reducing latency and improving response times.
- Added API health checks, monitoring, and logging with Azure Application Insights and Grafana to track system performance and reliability.

Technical Skills

Languages & Core: Python, SQL, JavaScript (ES6+), C++, C # .

Frameworks & Architecture: .Net Framework, Security (OAuth2/JWT), RESTful APIs, .Net API , MVC .Net , Angular 16- 18, React js github.

Projects

SentinelFlow: Distributed Rate-Limiting System

2024

ASP.NET Core, Redis, C#, Docker

- Built a **distributed traffic-shaping engine** using **ASP.NET Core** and **Redis**, applying atomic operations with Lua scripts to handle rate-limiting across multiple servers.
- Reduced server overhead by **30%** during traffic spikes by implementing a **Sliding Window Log** algorithm, preventing cascading failures in downstream services.
- Improved system resilience with **Polly** circuit breakers and retry policies, maintaining **99.9% uptime** during database outages.
- Containerized the solution with **Docker** and deployed on **Kubernetes**, ensuring scalability and high availability in production.

Learning Destiny: Scalable Relation-Based Platform

2023

Firebase, Angular, TypeScript, NoSQL

- Built a scalable, real-time education platform featuring **Cross-Cloud Data Synchronization** and a granular, role-based access control (RBAC) security model.
- Designed a high-availability backend capable of managing **thousands of concurrent WebSocket connections** for real-time user collaboration and state management.

Certifications & Leadership

- **Salesforce Trailblazer (Ranger Status):** Trailhead Profile — **Apex Specialist Superbadge** holder; expert in **Data Cloud** and **Agentforce Specialist** modules.
- **Technical Mentor at LearningDestiny Academy:** Guiding 50+ learners in **DSA** and Full-stack development, proving strong verbal/written communication and the ability to simplify complex technical issues.
